

IMPARTIALITY POLICY

AmSpec, through its Director, guarantees that:

Greenhouse Gas Inventory Verification activities, conducted by Validation Quality Management, are carried out impartially, without allowing commercial, financial, or any other pressure to compromise this impartiality.

AmSpec makes this Policy publicly available, demonstrating its understanding of the importance of impartiality in conducting our verification activities, as well as its commitment to managing conflicts of interest and ensuring objectivity across all its processes.

The verification service is made available to all applicants on a non-discriminatory basis, ensuring that there are no restrictions or impediments to accessing verification activities, whether financial or otherwise.

AmSpec does not offer or provide consulting and verification services for the same claim as a client, nor does it perform any other service that may compromise the confidentiality, objectivity, or impartiality of its verification processes.

AmSpec is committed to carefully reviewing all service requests to ensure impartiality and avoid conflicts of interest between parties involved in the process, thus mitigating any future risks that may compromise AmSpec as a Verification Body.

During its operations as a Verification Body, AmSpec identifies potential risks to impartiality and appropriately addresses their causes.

Any complaints received regarding AmSpec's services will be considered, and resolutions will be made in a manner that ensures impartiality.

All those involved in verification activities, including those who access confidential information, advisors, contractors, and AmSpec employees, sign the Impartiality Agreement and the Confidentiality and Confidentiality Agreement, committing to matters related to confidentiality and impartiality.

AmSpec takes action whenever it is informed of inappropriate connections with any consulting organization; or of advertisements that appear or imply that the verification process would be made easier, faster, or less costly by using their services.

Rio de Janeiro, October 8, 2025

Marcos Saliveros Neto – Executive Brazil Director
